Student Report card Project Report

Faheem Akbar

PROJECT REPORT: Student Report Card System (C++)

1. Introduction

The Student Report Card System is a console-based application developed using C++. It automates report card generation by calculating marks, percentage, and grades.

2. Objectives

- Develop a C++ application
- Calculate marks and percentage
- Assign grades
- Display formatted report

3. Tools & Technologies

Programming Language: C++

Libraries: iostream, iomanip, cstring

4. System Description

The system takes student data, inputs subject marks, calculates total and percentage, assigns grade, and displays a report card.

5. Features

- User-friendly interface
- Colored output
- Formatted report
- Reusable system

6. Algorithm

1. Start
2. Input data
3. Calculate total & percentage
4. Assign grade
5. Display report
6. Repeat or exit

7. Advantages

Fast, accurate, easy to use, good for learning

8. Limitations

No GUI, no data storage, limited validation

9. Conclusion

This project demonstrates core C++ concepts and practical application in education systems.
